Model	AR8800A
Combustible Gas Detector	

This highly reliable broad range combustible gas detector is an extremely useful tool in any environment where gasoline, propane, natural gas, fuel oil and many other explosive gases may be present. As a combustible gas or vapor source is approached, an audible signal increases in frequency and the red lights illuminate in sequence, to show the intensity of the leak. Now you can see and hear your way to pinpointing dangerous leaks. The unique flexible probe gives you access to gas leaks in hard to reach places.

>Technical Data

Ultimate sensitivity 5 – 50ppm;
 Six LED Sensitivity Lights;
 Instantaneous response;
 Used in almost any situation where combustible gasses, vapor or residues;
 Rapid warm up;
 Adjustable sensitivity;
 Audible signal;
 Carrying case, rechargeable batteries, and battery charger included .

Applications:

Gas lines and pipes;
 Heat Exchanger leaks;
 Hazardous living/working environments;
 Fuel in marine bilges;
 Exhaust and fuel leaks;
 Propane filling stations;
 Check manholes for safety.

General Characteristics

Power	6.0V Ni-Cad Batteries
Product Net Weight	620g (Including battery)
